

Consilex ST

Specific transparent reinforcement for cultural heritage restoration

Transparent penetrating consolidator, for natural stones, ornamental stone elements, mineral plasters and in general for the restoration of cultural heritage. It consists of ethyl esters of silicic acid in solvent, hardening by reaction with atmospheric humidity. It is applied by spraying at low pressure, until the treated surfaces are rejected, in order to guarantee an extremely deep consolidation.

CUSTOMS CODE: 3824 9970

COMPONENTS: Single-component

APPEARANCE: Liquid

AVAILABLE COLORS: Transparent

PACKAGING AND DIMENSIONS: Plastic can 10 l - Plastic can 5 l

FEATURES AND BENEFITS

The ethyl esters of the silicic acid, which are the fundamental constituents of Consilex ST, penetrate the degraded and depleted wall fabric of the originating connective bonds, reconstructing a stable, insoluble binder matrix that is resistant to water, to UV radiation, and to naturally harsh substances. The reinforcement occurs without giving rise to foreign and/or harmful salts and without involving colour variations. It can be conveniently used in combination with the transparent non-pellicular water repellent treatment Consilex Altrain.

FIELDS OF APPLICATION

Reinforcement, by adding silicic bonds, of manufactured goods and coatings made of porous stone: sandstone, trachyte, tufas, bricks, mineral plasters, terracotta, conglomerates, etc. Especially recommended for restoration interventions on architectural, monument and building works of historic significance.

ALLOWED SUPPORTS

Plasters - Bricks - Tuff - Mixed walls (bricks and stones) - Stone walls

PREPARATION OF SUPPORTS

The application media should be clean and dry; where necessary the cleaning should be carried out exclusively with demineralised water.

MODE OF USE

The product should be applied until "rejection", by low pressure spraying (maximum 0.5 bar). In situations of particular degradation a second application may be required after 10-20 days. Preliminary tests should always be carried out depending on the heterogeneity of stone materials, to determine the level and effectiveness of the reinforcement obtainable, the effective absorption of the product, the absence of changes in colour etc.. Remove any excess with Nitro thinner. Do not apply in the presence of direct exposure to sunlight of surfaces. Complete solution reaction will be obtained after about 4 weeks from the day of application.

APPLICATION METHODS

Brush - Sprayer

TOOL CLEANING

Nitro thinner - UNI solvent

KEY FEATURES

 Density: 0.92 kg/dm³

 Shelf-life: 6 months

 UV-resistant

 Flammable material

 Temperature of use: +10 / +25 °C

TECHNICAL SPECIFICATIONS

Not to be diluted

Flash-point < **21 °C**

Active substance **70 %**

CONSUMPTION

Approximately 0.2 litres of Consilex ST per square metre of surface to be treated, based on the porosity of the support.

STORAGE AND CONSERVATION

Protect from freezing. Store the product in its original packing, in a fresh and dry environment, avoiding frost and direct sunlight. Store the product at a temperature between +5°C and +35°C.
